## Cabinetry Care

CUSTOM CABINETRY

by TUSCAN HILLS™

### Preventative Care

We manufacture cabinets with a catalyzed conversion varnish finish, using the best material and techniques available. However, even the best cabinetry finishes are not designed for repeated exposure to water.

Always wipe up food and beverage spills immediately after they occur.

Do not wax your cabinets or use abrasive cleaners, powder cleaners, or furniture cleaners that remove wax build-up.

Do not allow oven cleaners to touch your cabinetry.

### Cleaning

Use a damp, clean, lint free cloth that is free of loose fibers. Cloth diapers and terry cloth work well.

Don't use a cloth that you use on dishes or counterotps. It could contain detergents, residue, and fibers that will harm your cabinets.

If a cleaner is necessary, use a mild, liquid, non-abrasive cleaner. Murphy's Oil Soap is a good choice. Apply the cleanser to your cleaning cloth. Don't apply directly to the cabinet.

Work in small areas so that you can dry the cabinet immediately with a clean, lint-free cloth that is free of loose fibers.

### Removing Grease

Use a clean, lint-free cloth that is free of loose fibers.

Don't use a cloth that you use on dishes or countertops as these could contain detergents, residues, and fibers that will harm your cabinets.

Mix a solution of equal parts white household vinegar and water. Dampen your cleaning cloth with this solution. Don't apply the solution directly to the cabinet.

Work in small areas so that you can dry the cabinet immediately with a clean, lint-free cloth that is free of loose fibers.

### Climate Control

Be aware that wood cabinetry installed in certain climates will take on or lose moisture, causing swelling or shrinkage of the components. Doors will swell in humid environments, especially slab type doors. Cabinetry installed in humid locations requires an air conditioned environment to mitigate this issue.

For drier locations, or in winter when humidity is low, a humidifier should be run to maintain a moderate moisture level in the environment. While shrinkage will not generally be as significant as potential swelling, it does occur. Please note that changes due to climate conditions are not a quality issue, and are not covered by your warranty.

### Touch Up

Even with normal use, you will need to touch up your cabinetry. Keep your touch up materials in a safe place for future needs!
